

Innovation through collaboration

We strive to make the world brighter, more durable, and efficient by tackling some of society's greatest challenges through TiO₂ innovation and reliability.

Introducing the Chemours Discovery Hub

A state-of-the-art facility designed to promote collaboration between Chemours, our customers and the scientific and academic communities

At the Chemours Discovery Hub, we're able to:

- State-of-the-art analytical capabilities to validate product standards, safety, regulatory requirements, and absence of impact from any NIAS (non-intentionally added substances)
- Analysis that supports process and product quality and consistency improvements
- Robust ILCC program with plant sites and remote labs to scale up with confidence
- Capacity for parallel customer formulation projects to speed development

Innovation - Quality - Reliability
