

This is Chemours in Antwerp (Kallo)

Chemours has always been committed to sustainable products and solutions. In 2018, following the United Nations Sustainable Development Goals (UN SDGs), we established 10 benchmarks that would provide a blueprint for all Chemours locations across the globe. Our goal is to reduce our carbon footprint, create a more inclusive environment, and ensure safety excellence in our workplaces. Ultimately, we want to journey to net-zero operations by 2050.

Antwerp and Belgium as a whole have been important hubs in the advancement of Europe. Today, that still holds true, as the port city has become the second-largest chemical cluster in the world, after Houston, Texas. Our presence in Antwerp dates back more than 40 years, with the establishment of our Antwerp Distribution Center (ADC). The street where ADC was located was even renamed Wilmington Street, in reference to the city of our parent company.

In 2018, we set 10 ambitious goals that contribute to a better world. These Corporate Responsibility Commitment (CRC) goals inspire us and enable us to meet the world's growing demands for greater equality and safer, more sustainable products.

Our Knowledge to Realize Your Business Successes

Today, our Antwerp facilities are located at the Singelberg, on the banks of the Schelde River. Our offices host our inside sales team and customer services teams, which support all our businesses for the entire EMEA region. Together with our logistics team, these dedicated employees organize the ordering, handling, shipping, and invoicing for all our EMEA customers, for an annual realized revenue of \$1.4B.

Since most of our goods are imported from other regions of the globe, these teams also coordinate the warehouse activities for the storage of our products. More specifically, our operations team organizes the repacking of our Ti-Pure™ products (imported from the U.S. and Mexico) through a contractor, with a unique process developed in partnership with them.

Responsible Handling of Products

Our Antwerp location also provides technical support for our Ti-Pure™ business, for both coatings and plastics applications. In our two on-site laboratories, we develop and enhance application techniques for our finished products. We are also actively involved in a research initiative called Remove2Reclaim, to develop the recycling of Ti-Pure™ contained in plastics.

Global Footprint

Our location employs nearly 85 vibrant individuals, who represent eight nationalities and fluently speak 12 languages.
