

# The Safe Side of Sustainability

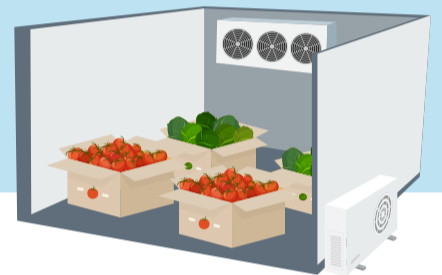

Implementing the phase down of hydrofluorocarbon (HFC) refrigerants requires careful consideration when choosing a low-GWP alternative across different sectors and applications.

Residential Heat Pumps

Commercial Refrigeration

Cold Storage Applications

## A2Ls are inherently safer than A3 refrigerants

- ✓ A2Ls are **less likely to form flammable concentrations**
- ✓ A2Ls are **more difficult to ignite**
- ✓ A2Ls are **less reactive**
- ✓ A2Ls have **lower combustion energy**

## Opteon™ XL refrigerants offer significant benefits

### Versatile

good technical fit in a wide range of applications

### Sustainable

long-term, cost-effective solution

### Efficient

strong energy performance

### Greater Margin of Safety

when installing, operating and maintaining equipment
